Virtual Carpet

All designs and illustrations in this book were created using Galaincha, the carpet designing software and exploRUG, the online custom rug marketing software. The designs in this book are available online for use in exploRUG free of cost. You can create your own color combinations of these designs and view in different rooms. Write to us at info@explorug.net for more information.

Transforming the way carpets are
designed, produced and marketed

Galaincha

Modern Technology for an Ancient Craft

business transformation

Galaincha is one of the best tools for rug designing, coloring, illustration, communicating, and manufacturing. These Features are packed in an extremely user-friendly interface such the design can be visualized as the finished product in minimum possible time, and then manufactured exactly as seen on computer - knot by knot.

design communication

Galaincha has a special function for converting abstract and natural photographs into rug designs in merely few clicks. These artworks precisely translate to weaving details, including the size, quality, and materials to be used for production such that these can be communicated by simply emailing one single design file in our format - less than 100 KB on average.

graph and estimation

Galaincha integrates graph of the artwork along with the design, which does not only ensure accuracy, but also saves enormous amount of production time otherwise required in the manual conversion of artwork into graph for weaving. It allows estimating material consumption so that you know the percentage of silk beforehand to project the cost of the custom rug.

digital future

Galaincha is driven with vision for a digital future. It is being constantly updated with truly futuristic features and technology. Our smart technology for vector resizing of raster artwork, on-screen color matching tool, and unbelievably realistic rendering of wool and silk texture are such examples which enable you to customize and render the rug right in front of the customer.
